

Explore International Market Opportunities with the Climate Technology Centre and Network (CTCN)

Speaker:

Ms. Diana Cartwright, Canada's National Designated Entity for the CTCN, Natural Resources Canada, Government of Canada

Are you interested in expanding into the emerging markets?

Do you have expertise in the development, transfer and/or deployment of climate technologies (including policy and capacity building) in developing countries?

The UN's Climate Technology Centre and Network (CTCN) offers climate advice and expertise to enable the transfer of technologies to developing countries at their request. The CTCN also provides opportunities for members to bid on commercial opportunities and share intelligence with a global network.

Come and learn how CTCN membership could benefit your organization, open new export markets and accelerate deployment of climate technologies to developing countries.
